

Analysis of Questionnaire Results

Introduction

A user research questionnaire was conducted to gather information about students' experiences with lost and found items on campus. The aim was to identify the challenges students face and determine the features they would expect in a Student Lost-and-Found Mobile Application. A total of **five (5) participants** were included in this simulated study.

Participant Demographics

Five university students from different years of study participated in the survey.

Category	Number of Participants
Male	3
Female	2
First Year	1
Second Year	1
Third Year	1
Fourth Year	1
Fifth Year	1

The participants represented different academic levels, providing a variety of perspectives.

Findings

Experience with Lost Items

Out of the five participants, **four (80%)** reported having lost an item on campus, while **one (20%)** had never lost any personal belonging.

The most commonly lost items included:

- Student ID card
- Scientific calculator
- House keys
- USB flash drive

This indicates that losing personal belongings is a common occurrence among students.

Recovery of Lost Items

Among the four participants who had lost items:

- **Two (50%)** successfully recovered their belongings.
- **Two (50%)** were unable to recover them.

Participants who recovered their items attributed their success to classmates, class WhatsApp groups, or the campus security office.

Methods Used to Search for Lost Items

Participants reported using several methods to recover lost belongings.

Method	Participants
Asked friends or classmates	4
Visited security office	3
Used WhatsApp groups	3
Posted on social media	1

The findings show that students currently rely on informal communication channels rather than a centralized system.

Experience with Found Items

Four participants indicated that they had found items belonging to other students.

Actions taken included:

- Returning the item to the security office.
- Attempting to locate the owner personally.
- Leaving the item where it was found due to uncertainty about what to do.

This suggests that many students are willing to help but lack an organized reporting mechanism.

Challenges Experienced

Participants identified several challenges when trying to recover or return lost items.

Challenge	Frequency
No central reporting system	5
Didn't know where to report	4
Slow communication	3
Difficulty identifying the owner	2

The absence of a centralized platform emerged as the most significant challenge.

Willingness to Use the Proposed Mobile Application

All five participants expressed interest in using the proposed Student Lost-and-Found Mobile Application.

Response Participants

Yes	4
Probably	1
Maybe	0
No	0

This demonstrates a strong acceptance of the proposed solution.

Preferred Features

Participants selected several features they considered important.

Feature	Selected by
Report Lost Item	5
Report Found Item	5
Upload Item Photos	5
Search by Category	3
Notifications	5
Search by Location	2
Claim Tracking	4
Secure User Login	3
Chat with Finder	3

Photo uploads, notifications, and efficient search capabilities were consistently identified as the most valuable features.

Importance of Notifications

Participants rated the importance of notifications on a five-point scale.

Rating	Participants
5 (Very Important)	4
4	1

The average rating was **4.8 out of 5**, indicating that real-time notifications are considered an essential feature.

Ease of Use

Participants also rated how easy the application should be to use.

Rating	Participants
5 (Very Easy)	5

Every participant agreed that the application should provide a simple and intuitive user interface.
